

CLINTON AMAYO

Fullstack Software Developer

amayoclin2022@gmail.com | +254 792 057 306 | Kisumu, Kenya | github.com/AmayoClinton | linkedin.com/in/amayo-clinton | dev.to/amayo_clinton

PROFESSIONAL SUMMARY

Fullstack software developer with hands-on experience building backend services and CLI tools in Go, JavaScript, and Ruby. Strong foundations in Linux, version control, relational databases, and API development. Trained through Zone01 Kisumu's project-based apprenticeship, working in Agile/Scrum teams on real codebases.

TECHNICAL SKILLS

Languages: Go (Golang), JavaScript, Ruby, HTML, Bash / Shell scripting

Databases: PostgreSQL, SQLite

Tools: Git, GitHub, Docker, Linux (Ubuntu), VS Code, Postman

Practices: Agile / Scrum, REST API design, code review, debugging, version control

Protocols: Lightning Network, Nostr, HTTP / REST, OAuth 2.0

PROJECTS

MojaAgent — Bitcoin Lightning Liquidity Tool for M-Pesa Agents

Backend Developer | github.com/AmayoClinton

- Built a Go REST API that bridges the Bitcoin Lightning Network and M-Pesa float management, enabling agents to receive and settle Bitcoin payments in real time without leaving their existing workflow.
- Integrated LND for payment routing and PostgreSQL for transaction state management and agent float tracking.
- Designed for the last-mile M-Pesa agent network in East Africa — addressing the liquidity gap between crypto rails and mobile money infrastructure.

Stack: Go · LND · PostgreSQL · Lightning Network · M-Pesa API

Sparkyard — Developer Discovery Platform for East Africa

Fullstack Developer | github.com/AmayoClinton

- Built a platform for discovering and connecting with developers and open-source projects across East Africa, surfacing regional work to a wider audience.
- Developed a Go backend with RESTful endpoints for developer profiles, project listings, and search; containerised with Docker for consistent deployment.
- Implemented a JavaScript frontend with filtering by tech stack, location, and project status.

Stack: Go · JavaScript · Docker · PostgreSQL

EXPERIENCE

Software Development Apprentice

Zone01 Kisumu | 2025 – Present | Kisumu, Kenya

- Built backend services and CLI tools in Go — goroutines, channels, structured error handling, and flat package layout following 01-edu audit conventions.
- Developed and consumed RESTful APIs; managed PostgreSQL schemas and queries.
- Operated daily on Linux (Ubuntu) for development, scripting, and server-side tooling.
- Collaborated via Git and GitHub — branching, pull requests, and peer code reviews in Agile team workflows.
- Published technical articles on DEV Community covering Go, Linux, DevOps, and open-source security.

WRITING — DEV COMMUNITY

- Nostr, Explained for Developers — A Deep Dive | dev.to/amayo_clinton
- 12 GitHub Actions Workflows That Will Quietly Save Your DevOps Team Hours Every Week
- Linux Permissions, Actually Explained — Not Just Memorized
- When AI Gets It Wrong: The Hidden Security Risk of Hallucinations in Cybersecurity

CORE STRENGTHS

- Fast self-learner — moved from no formal CS background to building backend systems in Go and shipping real tools within months.
- Genuine interest in East African tech context — building software that works for local users, infrastructure, and financial systems.
- Writes publicly about what he learns — technical articles documenting real problems solved, not just tutorials.
- Comfortable in Agile/Scrum environments with real delivery expectations and peer audit culture.
